[57] ABSTRACT

Method and compositions are provided for replication and expression of exogenous genes in microorganisms. Plasmids or virus DNA are cleaved to provide linear DNA having ligatable termini to which is inserted a gene having complementary termini, to provide a biologically functional replicon with a desired phenotypic property. The replicon is inserted into a microorganism cell by transformation. Isolation of the transformants provides cells for replication and expression of the DNA molecules present in the modified plasmid. The method provides a convenient and efficient way to introduce genetic capability into microorganisms for the production of nucleic acids and proteins, such as medically or commercially useful enzymes, which may have direct usefulness, or may find expression in the production of drugs, such as hormones, antibiotics, or the like, fixation of nitrogen, fermentation, utilization of specific feedstocks, or the like.

S3 for Ile de France

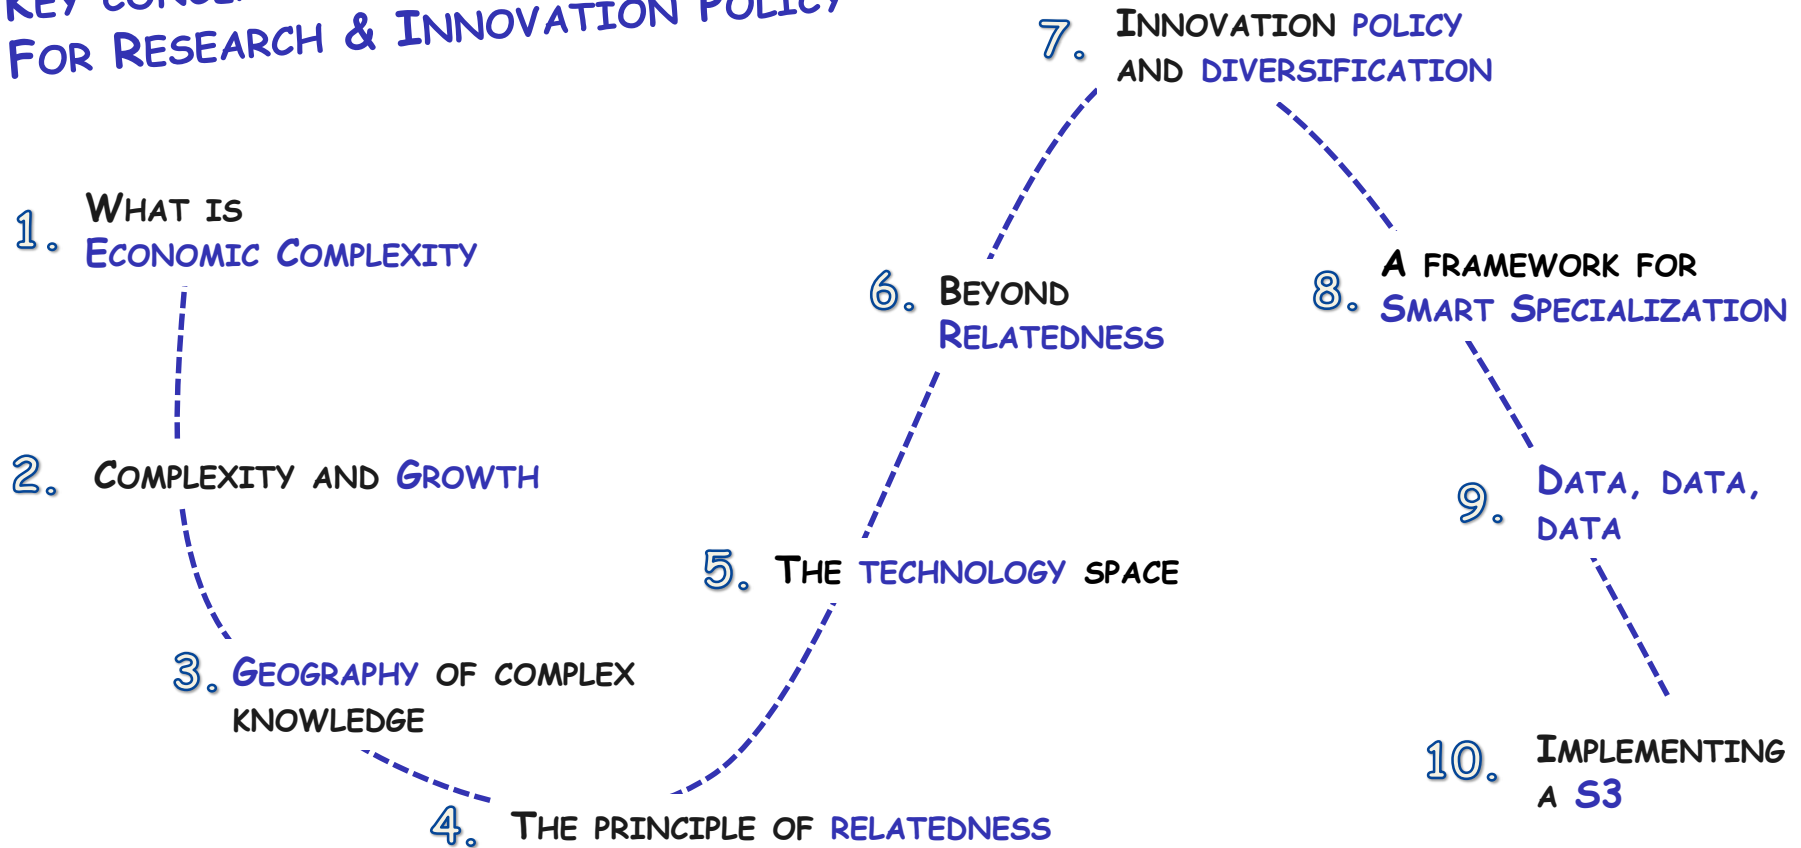

KEY CONCEPTS FROM ECONOMIC COMPLEXITY FOR RESEARCH & INNOVATION POLICY

KEY CONCEPTS FROM ECONOMIC COMPLEXITY FOR RESEARCH & INNOVATION POLICY

Implementing S3

- Entrepreneurial mayors (regional decision makers) will be the heroes
- EU coordination is crucial
- Targeted R&I subsidies and tax breaks but also:
 - Directed VC guiding funds
 - Public procurements for local start-ups
 - Special (urban) development zones
 - Incubators
 - Eco-system dynamics

Thanks!
